Project: San Francisco Temporary Occupancy, Night Noise Permitting Management Solution

The Challenge

What happens when your mobile infrastructure construction project is about to begin and you don't have the proper permits? Nothing happens. The project is instantly stalled and your competition is suddenly in a better spot than you are — all because they have permits and you do not. Proper documentation and permitting is crucial at every step in citywide public works projects. An often overlooked step in the construction process, permitting can be a make or break deal for construction clientele, resulting in thousands of dollars of missed billing or missed work windows that need to be rescheduled at a later date.

Avoid The Permit Trap

Rapid Systems Engineering (RSE) uses custom software to manage the permitting needs for multiple clients, ensuring that they stay on task and on target by obtaining crucial permits. The telecommunications industry evolves at a rapid pace, and as network expansions rollout to meet the demands of pervasive mobile technology, RSE is prepared to manage the day-to-day so that projects continue without interruption.

Solution

IoT development is not a new experience for Revolution11. Our proven forte is to prototype devices and applications based on input from a variety of markets – including the utility and industrial application space. Our team places creativity at the top of the list and is, therefore, well prepared to craft applications specifically designed to solve problems, be they old or new.
